

ALUMNO:

José Ricardo Cruz Aguilar

DOCENTE:

José Miguel Carrera Pacheco

ACTIVIDAD:

DOM y componentes dinámicos accesibles

BACKEND

En esta parte como backend desarrolle endpoints REST que proporcionan datos dinámicos al frontend y endpoints de error para validar manejo de accesibilidad, foco.

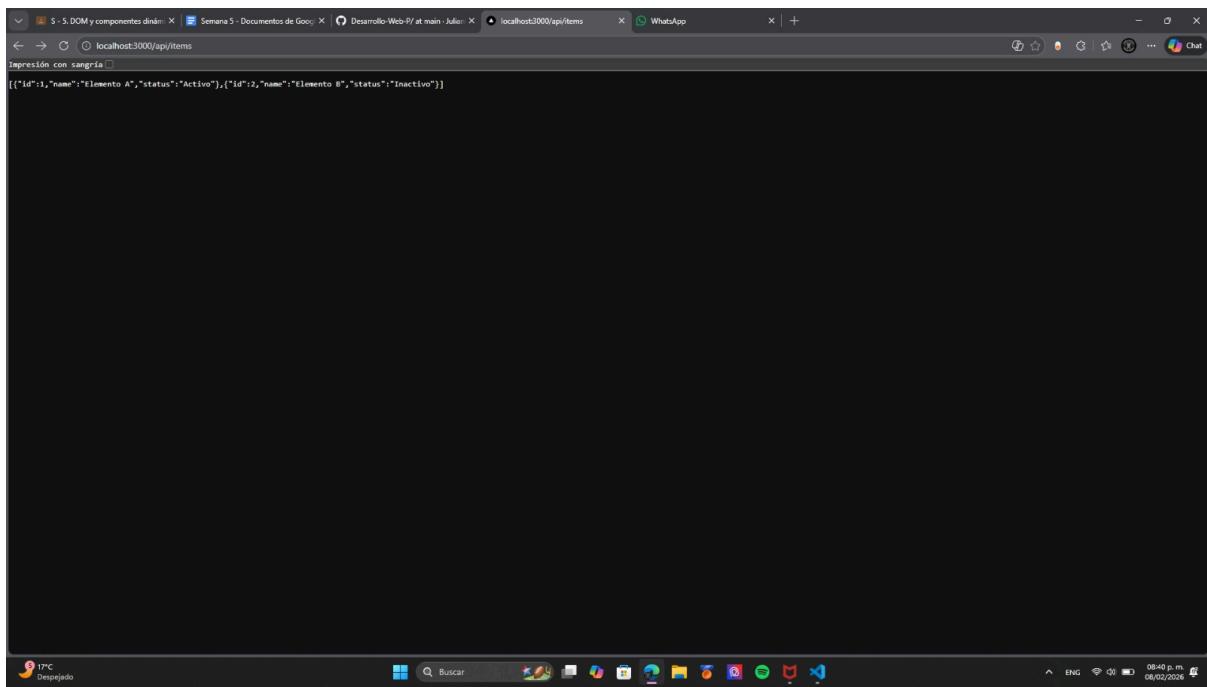

ENDPOINTS

GET /api/items

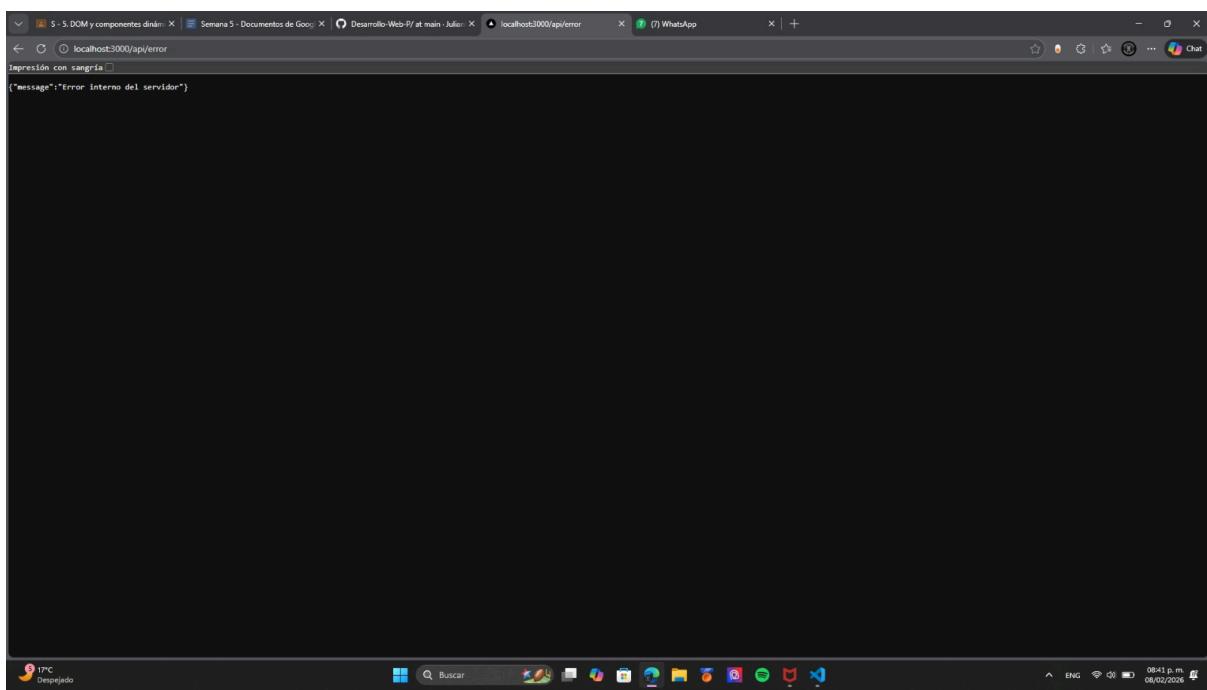

GET /api/error

The screenshot shows the Visual Studio Code interface with the following details:

- Explorer View:** Shows the project structure under "DWP". The "src" folder contains "index.js", "app.js", "index.js", ".env", "package-lock.json", "package.json", and "server.js".
- Code Editor:** The "index.js" file is open, displaying Node.js code for creating an Express app and defining two endpoints: "/api/items" and "/api/error".
- Terminal:** The terminal window shows the command "node src/index.js" being run, with the output "Servidor corriendo en el puerto 3000".
- Status Bar:** Shows the current file is "index.js", the line count is "Ln 17", column count is "Col 4", and encoding is "UTF-8". It also displays the date and time as "08/02/2026 09:26 p.m." and the file path as "C:\Users\ricar\OneDrive\Escritorio\dwp\Desarrollo-Web-P\Back-end> node src/index.js".

```
{\"id\":1,\"name\":\"Elemento A\",\"status\":\"Activo\"}, {\"id\":2,\"name\":\"Elemento B\",\"status\":\"Inactivo\"}]
```

```
{"message": "Error interno del servidor"}
```
